

AWS Control: Billing Optimisation

Optimise your AWS spend on an ongoing basis.

One of the major factors driving companies to migrate to the cloud is the minimal upfront cost of resource provisioning and an easy, pay-as-you-go operating model.

These two factors, along with the disposable nature of the wide variety of available computing resources, and the ease of resizing those resources, makes cloud an attractive alternative to large data centres.

However, balancing the demands of the business in terms of innovation and performance while delivering cost optimisation can be challenging. Organisations making a transition to the cloud or who have completed a transition will demand optimised costs but are unlikely to achieve this without an investment in operational excellence.

AWS Control: Billing Optimisation

AWS Control Billing Optimisation service from Version 1 gives customers access to best-practice cloud optimisation guides and an opportunity to discuss and evaluate your cloud estate with our optimisation experts. With Standard, Premium and Expert packages we have the right service to meet your individual needs.

“Over half of enterprises are struggling to see cloud ROI.”

Key Features

Optimised AWS billing service removes complexity

Service levels to match your requirements

Savings advice helps lower your AWS bill

Access to our cloud infrastructure experts

Benefits

Control your AWS bill

Optimised architecture guidance

Evidence of Consumption

Predictable cost planning

AWS Control: Billing Service Optimisation

Version 1 can help you understand your monthly AWS bill and advise on how to best optimise your cloud costs. Specific actions we advise customers to undertake include:

- Identifying and suspending ghost and unattached storage instances
- Right-sizing AWS consumption elements to reduce costs to an optimal level without impacting performance
- Identifying, suspending or terminating unused compute instances
- Uncovering opportunities to use reserved instances to drive cost savings from up-front investment

Constant tuning, management and automation of cloud assets is essential to achieve efficiency and cost optimisation.

Version 1 delivered savings of **\$346,000** in the first year of a cloud partnership with a major international airline.

Why choose Version 1 as your AWS Partner

As an AWS Premier Partner, we specialise in transforming and modernising the most complex enterprise workloads within tightly regulated industries. We adopt a highly accelerated approach that orchestrates and automates both partners and technology to ensure successful outcomes through modern agile and AI-assisted ways of working. In 2023, this approach earned us the title of AWS Collaboration Partner of the Year (EMEA), building on our Migration Partner of the Year (EMEA) in 2022.
